

Om Mehta

+91 8169251480 | Bhayandar, Mumbai | om.mehta24@sakec.ac.in | github.com/omji48 | linkedin.com/in/om-vivek-mehta

OBJECTIVE

Cybersecurity undergraduate with hands-on VAPT and red-team reporting experience, seeking the Indian Army Internship Program role in Cybersecurity Resilience and Risk Management in Medical IT Infrastructure — applying structured vulnerability assessment, gap analysis, and remediation-reporting skills to critical healthcare IT systems.

EDUCATION

Shah & Anchor Kutchhi Engineering College (SAKEC)

B.Tech – Cybersecurity

Mumbai, India

2024 – 2028

- Relevant coursework: Ethical Hacking, Network Security, Analysis of Algorithms, Microprocessors & Architecture
- PRN: 124BTCS1021 | Roll No: SYCS 25

EXPERIENCE

Cybersecurity Analyst Intern

Deepcytes Cyber Labs, UK

Mumbai, India

Jul 2025 – Dec 2025

- Performed red team engagements for 4+ clients covering web application VAPT, network vulnerability assessments, and attack path mapping.
- Identified and reported critical vulnerabilities across client environments, along with clear remediation guidance for security teams.
- Delivered structured vulnerability reports with remediation recommendations to client security teams — the same gap-analysis-to-remediation reporting cycle this internship's security-posture assessment requires.

Authorized Red Team Contributor

Cybersecurity Team – Web Security Testing

SAKEC, Mumbai

2025

- Conducted authorized security testing on the college website under institutional permission, evaluating web-facing assets for common security gaps as part of a student-led assessment initiative.

Cybersecurity Awareness Educator

ICICI Bank Community Outreach – via SAKEC

Mumbai, India

Jan 2026 – Mar 2026

- Conducted 4 cybersecurity awareness sessions for senior citizens covering phishing, social engineering, and safe digital banking practices.
- Referred and deputed by SAKEC as a student representative for the ICICI Bank initiative.

RELEVANT PROJECTS

ITGE – Identity & Trust Graph Engine

FastAPI, Neo4j, D3.js, Python

Jan 2026

- Built a real-time identity trust graph mapping users, devices, and services to detect high-risk attack paths in enterprise environments — directly analogous to mapping IT-asset risk in a hospital network.
- D3.js force-directed dashboard visualizes live trust scores; FastAPI backend queries Neo4j for lateral movement detection.

Ethical Hacking Lab Portfolio

Metasploit, Shodan, SET

2025

- Hands-on labs: privilege escalation via Metasploit, IoT recon via Shodan, phishing simulations via Social Engineering Toolkit.

TECHNICAL SKILLS

- Security: VAPT, Penetration Testing, Red Teaming, Gap Analysis, Vulnerability Reporting, Privilege Escalation, Social Engineering, OSINT, Shodan Recon
- Tools: Metasploit, Burp Suite, Nmap, SET, Wireshark
- Networking: TCP/IP, DNS, DHCP, OSI Model (CCNA Fundamentals)
- Dev & Platforms: FastAPI, Neo4j, D3.js, Python, Linux, Git, Vercel

CERTIFICATIONS

- Cisco: CCNA – Introduction to Networks
- Palo Alto Networks: Cybersecurity Virtual Internship | Security Operations Fundamentals | Network Security Fundamentals
- Cloud Security Fundamentals (Industry Certification)

- Deloitte: Cyber Job Simulation · Tata: Cybersecurity Analyst Simulation · PwC: Cyber Security Consulting Simulation

CTFS & ACTIVITIES

- Xploitathon CTF – K.J. Somaiya School of Engineering (KJSSE) | Web exploitation, forensics, and network challenges
- Cybersecurity Club – Active member, SAKEC; participated in internal security challenge events
